OFFICIAL SYSTEM OPERATING MANUAL & ARCHITECTURAL SPECIFICATION

Office Info Controller

Enterprise Zero-Leak Corporate Governance, Ephemeral Token Delegation & Multimodal AI Compliance Verification

Executive Document Reference: OIC-MAN-2026-v3.2
Classification: RESTRICTED / INTERNAL PRODUCTION ONLY
Target Audience: Chief Executive Officers, Vice Presidents, Compliance Officers, Heads of Department, Team Leads, and Distributed Production Engineers.
Applicable Standard: ISO/IEC 27001, FIPS 140-3 Hardware Cryptography, Zero-Leak Policy #804-A.

System Version: v3.2.0 (Release 2026)	**Core Cipher:** AES-256-GCM Envelope
Default Master Efficiency: 94.5% Verified	**Brand Primary Palette:** Royal Blue #0066FF
Demonstration 2FA Token: 123456	**Compliance Engine:** Multimodal Neural OCR
Host URL: http://localhost:8080	**Air-Gap Policy:** Policy #804-A Active

EXECUTIVE MANDATE & SUMMARY:
The **Office Info Controller** application is an enterprise-grade platform designed to prevent corporate asset leaks, ensure strict alignment with master 2026 corporate branding, and provide executive oversight through real-time telemetry. Every file rendered inside the application lives strictly within an air-gapped, volatile browser buffer stamped with dynamic forensic watermarks. Direct downloads, raw file modifications, and unapproved public deployments are cryptographically locked.

1. Cryptographic Security Architecture

Office Info Controller operates on a **Zero-Trust Information Governance Model**. The application guarantees complete confidentiality and brand conformity through four complementary cryptographic pillars:

1. AES-256 Envelope Encryption	Multi-tier envelope ciphering (DEK wrapped by KEK). FIPS 140-3 Level 3 HSM rotation.	All master vectors and financial directives are sealed at rest and during transit. Keys rotate every 24 hours.
2. Ephemeral Time-Bound Viewing	Decrypted buffers exist strictly in volatile memory bound to synchronized microsecond NTP timers.	Buffers self-destruct (DoD 5220.22-M memory scrub) immediately upon token expiration. Zero disk caching.
3. AI Visual & Semantic Gating	Neural computer vision with vector path hash mapping, CIE2000 chromatic sampling, and ERP OCR.	Prevents legacy 2023 emblems, non-compliant hex palettes, or outdated efficiency numbers from publishing.
4. Forensic Leak Watermarking	Dynamic multi-angle overt overlay + covert steganographic micro-dithered identity tags.	Permanently ties viewer Lead ID, enterprise IP address, and high-precision UTC timestamp to viewport.

2. Authentication, Role Selection & 2FA Flow

Access to Office Info Controller requires corporate email verification and two-factor authentication (2FA).

2.1 Role-Based Access Control (RBAC) Matrix

Role Pill	Assigned Identifier	Privilege Scope & Capabilities
CEO	`EXEC-ID-001`	Full enterprise clearance. Issues directives, approves master assets, monitors global audit logs.
VP	`VP-ID-012`	Vice presidential clearance. Monitors departmental metrics and product efficiency goals.
HR	`HR-ID-045`	Governance oversight. Manages team onboarding credentials and identity watermark tags.
HOD	`HOD-ID-078`	Departmental command. Supervises policy compliance and team asset delegations.
Team Lead	`LEAD-ID-104`	Lead clearance. Accesses Directives Inbox, Sandboxed Viewer, and issues Ephemeral Tokens.
Employee	`EMP-ID-882`	Production clearance. Views locked assets, operates AI Brand Compliance Scanner & 1-Click Auto-Fix.

2.2 Two-Factor Authentication (2FA) & Slide Transitions

Upon submitting the login form, a 6-digit OTP modal is triggered with a pre-filled demonstration hint: 123456.

• **Valid OTP (123456):** Triggers a celebratory audio chime and an animated **Green Checkmark (✓) Success Slide**, displaying cryptographic handshake confirmation before sliding smoothly into the dashboard.

• **Invalid OTP:** Plays an error buzz and renders a vibrating **Red Cross (X) Error Slide**, dispatches a security warning, and prompts the user to re-enter the authorized token.

3. Executive Directives & Sandboxed Viewer Guide

When authenticated as a **Team Lead**, **HOD**, **HR**, **VP**, or **CEO**, the user is granted access to the Executive Command Center:

3.1 Executive Directives Inbox & Verified Efficiency Standard

The Directives Inbox aggregates signed executive communications and corporate benchmarks:
• **Verified Product Efficiency:** Features an interactive circular radial gauge confirming the current corporate standard: **94.5% Product Efficiency** (+3.2% Q4 growth).
• **Active Master Directives:** Outlines CEO mandate ordering immediate deprecation of 2023 brand assets and VP operational efficiency benchmarks.
• **Sealed Master Assets:** Provides 1-click sandboxed access to Official Logo v3.2, Brand Guidelines 2026.pdf, and Corporate Metric Standard v4.pdf.

3.2 Read-Only Sandboxed Viewer with Forensic Watermarking

The protected viewport renders documents in an air-gapped sandbox without storing unencrypted files on the client machine:
• **Live Ticking Countdown Clock:** Displays remaining access (e.g., Access Expires in: 01:59:42) ticking down second-by-second.
• **Dynamic Forensic Watermark:** A multi-angle overlay continuously projects: VIEWER: LEAD-ID-104 | IP: 192.168.1.1 | UTC TIMESTAMP | CONFIDENTIAL.
• **Anti-Exfiltration Locks (Zero-Leak Policy #804-A):** Right-click context menus are intercepted. Clicking 'Download Raw File' or 'Direct Edit' immediately opens a security restriction modal stating that raw extraction is strictly prohibited.

3.3 Secure Ephemeral Delegation Panel

Team Leads can delegate time-bound viewing tokens to colleagues (e.g. Graphic Designers, Product Managers):
1. Click **Issue New Ephemeral Token**.
2. Select the target team member, target master file, and expiration window (15m, 1h, 4h, 24h).
3. Click **Generate Cryptographic Token**. The platform provisions a unique token (e.g. TOK-8891-B) with dynamic watermarking.
4. **Revocation:** Leads can click **Revoke Access** at any point in the Active Delegated Tokens table to immediately invalidate the token.

4. Employee Workspace & AI Compliance Scanner Guide

When authenticated as an **Employee**, production teams work with assigned master assets and validate creative collateral:

4.1 Assigned Locked Assets & Ephemeral CDN Links

Employees can view active assets assigned by their leads with real-time countdown clocks (e.g., 00:44:19) and 1-click copyable ephemeral CDN URLs.

4.2 Demonstration Presets (Compliant vs Non-Compliant)

Attribute	Preset A (Compliant Draft)	Preset B (Non-Compliant Draft)
Brand Vector Logo	**Official Logo v3.2 (Approved)** Vector geometry matches master SHA-256 hash.	**Legacy Emblem v2.1 (2023)** Deprecated clunky polygon emblem.
Primary Color Palette	**Royal Blue (#0066FF)** Exact corporate chromatic standard.	**Unauthorized Orange (#FF5722)** Policy color violation.
Efficiency Assertion	**94.5% Product Efficiency** Verified Q4 executive benchmark.	**81.2% Product Efficiency** Outdated 2023 metric rejected.
AI Verification Gate	**PASS (100% Score)**	**FAIL (3 Policy Violations)**
Action Unlocked	**Push to Official Website (Unlocked)**	**1-Click AI Auto-Fix (Enabled)**

4.3 AI Verification Sequence & 1-Click Auto-Fix Workflow

1. Click **Run AI Compliance Scan**. An animated laser line scans the draft while an audit progress bar runs 3 neural checks:
• *Phase 1:* Vector path hash matching against Master Registry v3.2.
• *Phase 2:* Chromatic frequency histogram sampling (Delta E < 1.0 threshold).
• *Phase 3:* Neural OCR metric verification against Q4 Executive Directive.
2. **If Non-Compliant:** A glowing **Red Cross (✕)** highlights the exact violations in plain English and locks publishing.
3. **1-Click AI Auto-Fix:** Clicking this button automatically replaces the outdated vector with Official Logo v3.2, converts the color hex to #0066FF, updates the efficiency claim to 94.5%, and auto-transitions the state to **Green Checkmark (✓) Verified**!
4. **Production Push:** Once compliant, the **Push to Official Website** button unlocks, triggering edge CDN cache synchronization.

5. Security Operations Center (SOC) Monitoring Guide

The **Live SOC Monitoring Center** tab provides governance officers and security leads with real-time observability across the entire platform:

5.1 Real-Time Observability KPIs

• **Air-Gapped Viewers:** Active read-only sessions with hardware IP binding and 100% watermark enforcement.
• **AI Compliance Gate Throughput:** Daily scan volume (184+), overall pass rate (92.4%), and 100% auto-fix success rate.
• **Policy #804-A Blocks:** Intercepted raw download attempts, screenshot captures, and unauthorized context menu inspections.
• **AES-256 Envelope KMS Health:** Real-time HSM latency (11.2ms) and 24-hour key rotation countdown.

5.2 Visual Charts & Oscillating Heartbeat Waveform

• **Hourly Scan Volume Bar Chart:** Multi-bar SVG visualization breaking down Passed, Auto-Fixed, and Flagged drafts per hour.
• **Violation Spectrum Breakdown:** Tracks distribution of legacy emblems (48%), wrong color hexes (32%), and outdated numbers (20%).
• **HSM Heartbeat Waveform:** Live oscillating SVG path demonstrating sub-15ms network latency.

5.3 Emergency Remote Kill Switch

Security officers can view all active client sessions in the Active Ephemeral Sandboxed Sessions table. Clicking **Kill Session** instantly revokes access, triggers DoD memory wiping on the remote client, and dispatches a high-priority SIEM alert.

5.4 Interactive Simulation & SIEM Export Tools

• **Simulate Breach Attempt:** Tests Zero-Leak Policy #804-A by simulating an unauthorized download, triggering an alert tone, and logging a CRITICAL SIEM incident.
• **Simulate AI Violation:** Simulates non-compliant submissions to test CI/CD rejection.
• **Export SIEM Report:** Exports the complete forensic audit log as a structured JSON file (siem-forensic-report.json).

6. Deployment, Server Setup & Verification

Office Info Controller is a zero-dependency, ultra-portable enterprise web application.

Startup Method	Command / Action	Operational Description
Method 1: 1-Click Batch	`Double-click start.bat`	Launches local Python HTTP server and opens browser automatically at http://localhost:8080.
Method 2: Python Server	`python serve.py`	Starts multi-threaded HTTP server with no-cache headers enabled for rapid local testing.

Method 3: Direct File	`Open index.html in browser`	Runs directly via file:/// protocol with zero installation or build steps required.

OFFICIAL TEST CREDENTIALS & DEMO VALUES:

- **Corporate Email:** alex.vance@acrobatix.com (or any valid company email)
- **Company Name:** Acrobatix Global Enterprises
- **Master Password:** MasterPass2026!
- **6-Digit 2FA Token:** 123456 (Pre-fill hint can be clicked to auto-populate)
- **Fast Demo Login:** Click **Fast Demo Login** in the top navigation bar for immediate 1-click entry.
